## SKILLS

JAVA  Node.js  React.js  Javascript  Vue.js
C  C++  HTML  CSS  SQL  OOPS

## PERSONAL PROJECTS

E-Commers Services
- Technology use : React.js
- A React.js ecommerce website project would involve building a web application for selling products online. The website would have a user-friendly interface that allows customers to browse through various products and make purchases
- In this role, I also utilized other technologies such as HTML, CSS, JavaScript.
- The website will be built using React.js, with additional libraries and frameworks such as React Router, styled Components Redux, and Bootstrap.

Generic Standard Template Library
- Technology use : C++
- This project contains the generic implementation of all data structures (linear or nonlinear)
- • This project contains all the functionality for the primary operations as well as some extra operations which are helpful for the development purpose

Tourism Management System
- Technology use : JAVA
- The main objective of the Tourism Management System is to manage the details of Customer, Hotel Booking, Cancellation and Tourism places. It manages all the information about Users, Hotel, Packages etc.
- The project is totally built at administrative end and thus only the administrator is guaranteed the access to the backend database. The purpose of this project is to build an application program to reduce the manual work for managing Tourists, Booking, Places etc.
